

**Amendments to the Claims:**

*This listing of claims will replace all prior versions, and listings, of claims in the application:*

**Listing of Claims:**

1-23. (Canceled)

24. (Currently Amended) A device for reproducing a content recorded on a recording medium, the device comprising:

- a recording medium control module configured to reproduce the content from the recording medium;
- a network control module coupled with the recording control module, the network control module configured to download content;
- a playback control module coupled with the recording medium control module and the network control module, the playback control module configured to output the content reproduced by the recording medium control module and/or the content downloaded by the network control module; and
- a system control module coupled with the recording medium control module and the network control module, the system control module configured to control the operations of the recording medium control module and the network control module;

wherein the content recorded on the recording medium includes ~~one or more~~ **all** of the following: audiovisual content, identification information for identifying the audiovisual content, universal **resource** ~~resource~~ locator (URL) information for indicating a location of a ~~server from which~~ related content which relates to the audiovisual content ~~is downloaded~~, and data for use in downloading the related content, ~~wherein the device automatically requests the data and the data facilitates~~ establishing a connection between the server and the device;

**wherein the recording medium control module automatically reproduces the data on the recording media;** and

wherein the system control module is further configured to instruct the network control module to connect with ~~[[the]]~~ a server **which stores the related content** using the URL information and the **data content** reproduced by the recording medium control module, to send the content identification information reproduced by the recording medium control module to the server, and to download the related content from the server using the data to execute a command to connect the device to the server, if ~~[[the]]~~ a user **indicates to the device requests** to download the related content.

25. (Currently Amended) A method for reproducing a content recorded on a recording medium, the method comprising:

reproducing audiovisual content, identification information for identifying the audiovisual content, universal resource locator (URL) information for indicating a location of a ~~server from which~~ related content which is related to the audiovisual content ~~is downloaded~~, and **data** for use in downloading the related content, wherein the device automatically requests the **data** and ~~the data facilitates~~ establishing a connection between ~~[[the]]~~ a server and ~~[[the]]~~ a **reproducing** device;

**reproducing the data on the recording media automatically;**

connecting with the server ~~indicated by~~ **which stores the related content using** the URL information ~~by using and~~ the data reproduced from the recording medium;

sending the content identification information reproduced from the recording medium to the server;

downloading the related content from the server ~~using the data to execute a command to connect the device to the server~~, if ~~[[the]]~~ a user **indicates to the device requests** to download the related content; and

outputting, to a display device, the audiovisual content which is reproduced from the recording medium and/or the related content which is downloaded from the server.

26. (Cancelled)

27. (New) A method for recording a content on a recording medium comprising:

recording an audiovisual content, recording an identification information for identifying the audiovisual content, recording a URL information indicating a location of a related content relating to the audiovisual content; and

recording data for use in downloading the related content and establishing a connection between a server and a reproducing device;

wherein the data on the recording media is reproduced automatically by the reproducing device; and

wherein the URL information and the data are used for connecting with the server which stores the related content, sending the content identification information to the sever, downloading the related content from the server, if a user requests to download the related content, and outputting, to a display device, the audiovisual content which is reproduced from the recording medium and/or the related content which is downloaded from the server.
